Contact

Your Electrical Safety are experts in our field. Our brand is synonymous with **trust, **expertise** and unwavering **dedication** to electrical safety.**

Your electrical safety is a domestic and commercial electrical contractor. We maintain the safety of homes and businesses across Kent and beyond. Every flicker of a lightbulb, hum of a newly installed solar panel or satisfied nod of a local customer is a testament to our quality and commitment.

We provide comprehensive electrical services and over the years, we've carried out all types of electrical jobs, from simple domestic maintenance tasks to installing Solar panels on commercial farms, wiring new-build offices and residential towers, and refurbishing supermarkets.

By merging two decades of electrical expertise with a passion for electrical safety, we ensure our services meet the current standards and set new ones. With our dedication to quality, transparency and outstanding customer service, we integrate the latest technologies, empowering our community to have peace of mind when it comes to their home and family.

SERVICES

Inviting a stranger into your home or business is always a concern. That's why we only employ professional, qualified and friendly electricians with the experience and knowledge to look after your electrical needs. See below a comprehensive breakdown of the services we offer our clients here at YES:

Electrical Safety inspection

We conduct thorough and comprehensive electrical safety inspection to identify potential hazards or faults in your electrical system and this is completely FREE of charge.

EICR (Electrical Installation Condition Reports)

An EICR, also known as a periodic inspection, is a detailed assessment of the condition of your electrical installations.

Voltage Optimisation

With our voltage optimisation solutions, we can help you reduce energy consumption, lower electricity bills, and extend the lifespan of your electrical equipment.

Repairs and Upgrades

Whether you need a simple repair or a complete electrical system upgrade, our skilled technicians are here to assist you.

Did you know?

Did you know that over 7000 homes experience an electrical fire annually and that over £100 million in damages are caused by fires at home in the UK?

FREE ELECTRICAL SAFETY INSPECTIONS

Our FREE Electrical safety check covers the following areas:

- > Fuse box
- > Sockets
- > Lights
- > Cooker circuits
- > Electric heating
- > Main earthing to property
- > Main earthing to gas & water supplies

At the end of the free electrical safety inspection our electrician will provide you with a VIR report and will discuss the results.

What's in it for us? Hopefully everything will be alright but should it not our electrician will discuss with you what areas would benefit from improvement and what it may cost to rectify. Hopefully you will use us to carry out any remedial or minor works but you are under no obligation to do so and our report can be freely used to obtain other quotations.

ELECTRICAL REMEDIAL & MINOR WORKS

Electrical remedial and minor works are usually carried out after you've had an electrical safety check or an electrical installation condition report carried out which have found minor faults or defects.

- ⚡ Replacement of old or damaged plug sockets
- ⚡ Replacement of old or failing lights.
- ⚡ Broken down earthing

Electrical remedial and minor works can be quoted for from the codes found by the EICR. Definitions of these codes are:

- **Code C1 fault:** An immediate danger and requires urgent attention and repair as soon as possible
- **Code C2 fault:** There is a potential danger and is an unsatisfactory condition which requires attention.
- **Code C3 fault:** A fault has been observed and there are recommended improvements that can be made.

MAINS POWERED SMOKE ALARMS

Smoke alarms are crucial in domestic households to provide early detection of fires and ultimately save lives. Our smoke alarms provide a rapid response to slow smouldering fires alerting you and your family to danger quickly. Mains interlinked smoke alarms talk to each other and when one is triggered all the alarms in your home will go off simultaneously letting you know about an emergency sooner or when you may not hear and alarm in a bedroom.

EICR & ELECTRICAL SAFETY CERTIFICATES

The EICR involves precise and thorough testing of your homes hidden in electrical cables and connections with specialist testing equipment. The EICR is a document proving you maintain your homes electrical installation which often is a requirement of your home insurance. In the same way as a boiler or your car would be serviced every year consider having an EICR carried out at the recommended intervals to provide peace of mind your home is electrically safe.

FUSE BOX & CONSUMER UNIT REPLACEMENT

Update your fuse box so your electrics keep working safely and meet the latest regulations. Having an up to date fuse box (consumer unit) is a major part of ensuring your electrics are safe and up to standard. All of our installations are fully certified and well even notify your local authority building control of the replacement.

- ⚡ Safety and protection for your home and family
- ⚡ Trusted engineers to fit your new fuse box replacement.
- ⚡ Improve your homes electrics
